Round-67

Batch No- CS/NVIT-M/67/01

Introduction

My project, **"Event Management Planner DB"**, is designed to efficiently manage social events like weddings, birthdays, and reunions. It automates tasks such as event tracking, guest management, budget and payment handling, and feedback collection. This system ensures data accuracy, smooth operations, and provides meaningful insights for better event planning.

Project Name

"Event Management and Planner DB"

Project Summary

Overview:

A real-world database management system tailored for managing events, focusing on event details, guest tracking, budget and payment management, logistics, and review collection.

Objectives:

- Record and manage daily events and their details.
- Track guests, food preferences, and RSVPs automatically
- Manage budget allocations and payments.
- Monitor logistics, tasks, and schedules for each event.
- Collect and analyse reviews and feedback.
- Generate reports for events, payments, and guest statistics.

Structured Tables Included in the Project

Table Name	Purpose
EventUsers	Store information about event organizers/users
Categories	Categorize events (Wedding, Birthday, Reunion/Farewell)
FoodCategories	Food type classification (Vegetarian, Non-Veg, etc.)
FoodPreferences	Track guest food preferences
LocationPreferences	Track preferred event locations per user
EventDetails	Record event information

Table Name	Purpose
Guests	Guest information and RSVP status
Budget	Event-wise budget allocations and spent amounts
Payments	Event payments and their statuses
Invoices	Event invoices with discount and final amount
Logistics	Track items, vendors, and quantities for events
Tasks	Event tasks, priorities, and due dates
Discounts	Event discounts and types
Schedules	Event activity schedule with start/end time
Reviews	Collect guest reviews and ratings
UserEventLog	Track first event of each user (trigger)
